Shailesh_task7

Tools Used:
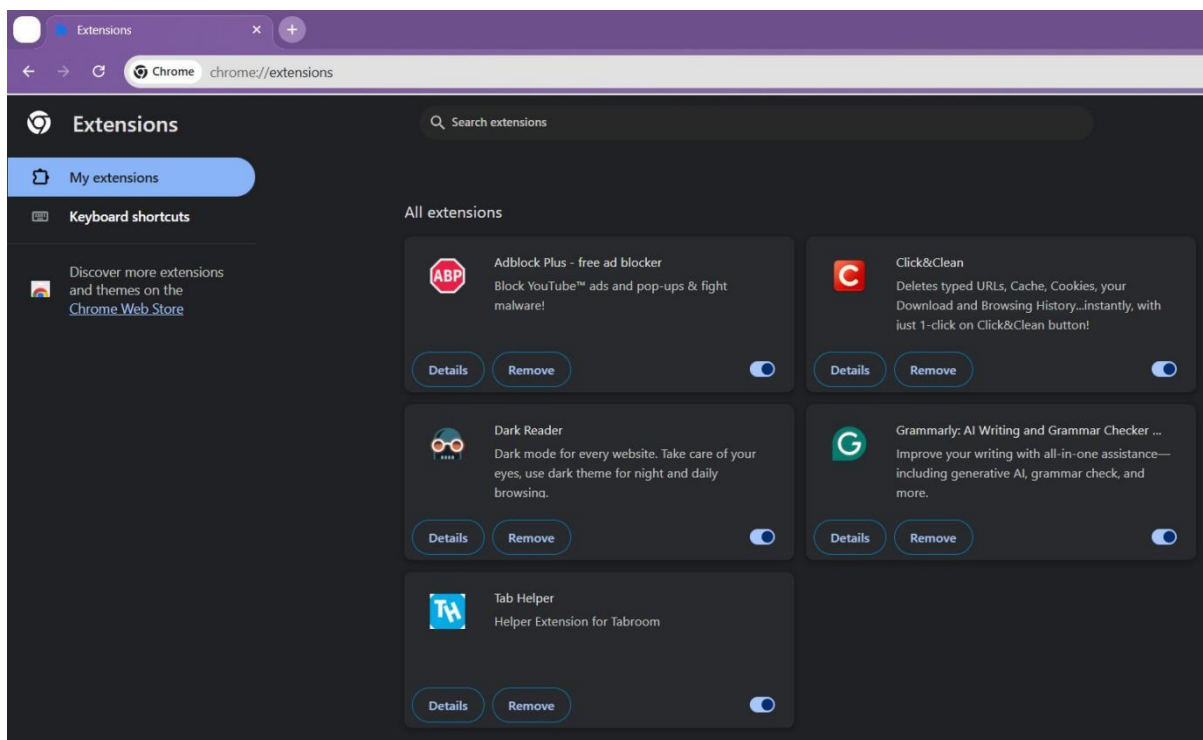

Browser: Google Chrome

Extension Manager URL: Chrome://extensions/

1. Open your browser's extension / add-ons manager.

Extension Manager URL: Chrome://extensions/

2. Review all installed extensions carefully.

3. Check permissions and reviews for each extension.

Permissions:

Adblock Plus: Read and change all your data on all websites.

      Display notifications.

Click&Clean: Read and change your browsing history on all your signed-in devices.

Grammarly: Read your browsing history.

Display notifications.

Reviews:

Adblock Plus: 4.4 (5.0)

Click &Clean: 4.8 (5.0)

Dark Reader: 4.7 (5.0)

Grammarly: 4.6 (5.0)

Tab Helper: 2.0 (5.0)

4. Identify any unused or suspicious extensions.

Extensions

- Tab Helper Extension
- Click &Clean
- Dark Reader

5. Remove suspicious or unnecessary extensions.

Extension Name	Reason for removal
Tab Helper	Unused, found to be a clone of another extension.
Click &Clean	High permissions, Unnecessary access.
Dark Reader	Unused.

6. Restart browser and check for performance improvements.

- Relaunched chrome to ensure all changes took effect.
- Improved startup time and reduced memory usage.

7. Research how malicious extensions can harm users.

- The malicious extensions can track browsing history.
- Inject ads or steal credentials.
- Slow down system performance.

Outcome:

Gained awareness of browser security risks, improved system performance, and learned how to manage and remove unsafe browser extensions effectively.
